About me

A self-taught web developer specializing in client-side development of websites using react, a JavaScript library, for rendering interactive user interfaces. My passions stem from the fact that front end development requires one to bridge the gap between artistry and technicality in order to deliver quality and user friendly interfaces, which is what I have to offer.

Education

Bachelor of Business Administration (2018-2021)
University of KwaZulu-Natal
Relevant modules: Computing 102, Information management 201

Personal projects

Alcohol e-commerce store [https://asandahdevs.github.io/Amabele]
A website built to advertise the sale of alcoholic beverages with the aim of facilitating a transaction from the end user by allowing them to add, update and remove items to and from a shopping cart. The website was built using react.js to render the user interfaces that are interactive without manipulating the DOM.React router was used to route to different "pages" of the website while react-bootstrap was used for responsive design for the e-commerce store.

Car buyers' website [https://asandahdevs.github.io/carBuyingSite.github.io/]
A website designed for those who want to browse the web for their latest vehicle purchase or simply just want to check the availability of a car based on their budget. The language used to build this website were HTML, CSS and JavaScript with the help of bootstrap (CSS framework) in creating a responsive website for viewing on mobile devices.

A seafood website [https://asandahdevs.github.io/]
A single page website created for the sole purpose of advertising the different seafood dishes made available by Mchunu seafoods, the company, for people situated in and around the eThekwini region in KwaZulu-Natal, a South African province. This website was built using HTML and a CSS framework (Bootstrap) in creating a responsive layout.

Skills

- Hypertext-markup language (HTML)
- Cascading style sheets (CSS)
- Bootstrap (CSS framework)
- JavaScript
- React.js (JavaScript library)
- Document object model manipulation (DOM)
- Asynchronous JavaScript and XML (AJAX)
- Git (version control system)
- Communication skills
- Ability to learn new concepts when needed
